

How EscrowTab Uses Certn and Drata for SOC 2 Compliance

EscrowTab is a US fintech company with a simple, scalable, and secure eClosing solution that applies In-Person Electronic Notarization (IPEN) to streamline real estate operation.

Here's how EscrowTab uses a Certn and Drata integration to maintain SOC 2 compliance and manage security more efficiently.

EscrowTab

Streamling **SOC 2** Compliance

"It's very impressive to our larger clients that we have the compliance program that we do. We couldn't have achieved it as **easily** as we did without tools like Certn and Drata that **streamline the process** and offload some of the work from my team's plate."

With one secure link and a few clicks, Certn's background screening provides an easy, intuitive user experience for existing employees and candidates.

Secure and Streamlined Compliance for Cybersecurity

With Certn

Faster Turnaround Times

Seamless User Experience

Customizable Packages

24/7 Support

Service Organization Control Type 2 (SOC 2) is an auditing procedure that helps ensure internal controls are in place and operating effectively to secure sensitive data. As a fintech company working with banks and lending companies that handle sensitive documents, for EscrowTab, proving and monitoring compliance is mandatory. While a SOC 2 attestation is imperative for EscrowTab to complete for security reasons, the company has found that it also helps with sales.

“Drata was able to configure the integration so that I can pull reports directly from Certn, making it even easier to prove compliance within the hiring process framework. So now, the process is perfect for my needs”

Adam Carlson
Chief Information Officer
