

How Legal Systems Uses Certn ID to Streamline ID Verification

Legal Systems' team of lawyers and IT professionals helps law firms, real estate companies, and other businesses with digital transformation. They specialize in automating processes and contracts so their clients can save time and money and reduce errors.

Here's how Legal Systems uses Certn ID, formerly Trustmatic, to digitize and streamline the ID verification portion of contracts and AML compliance.

Streamlining ID Verification

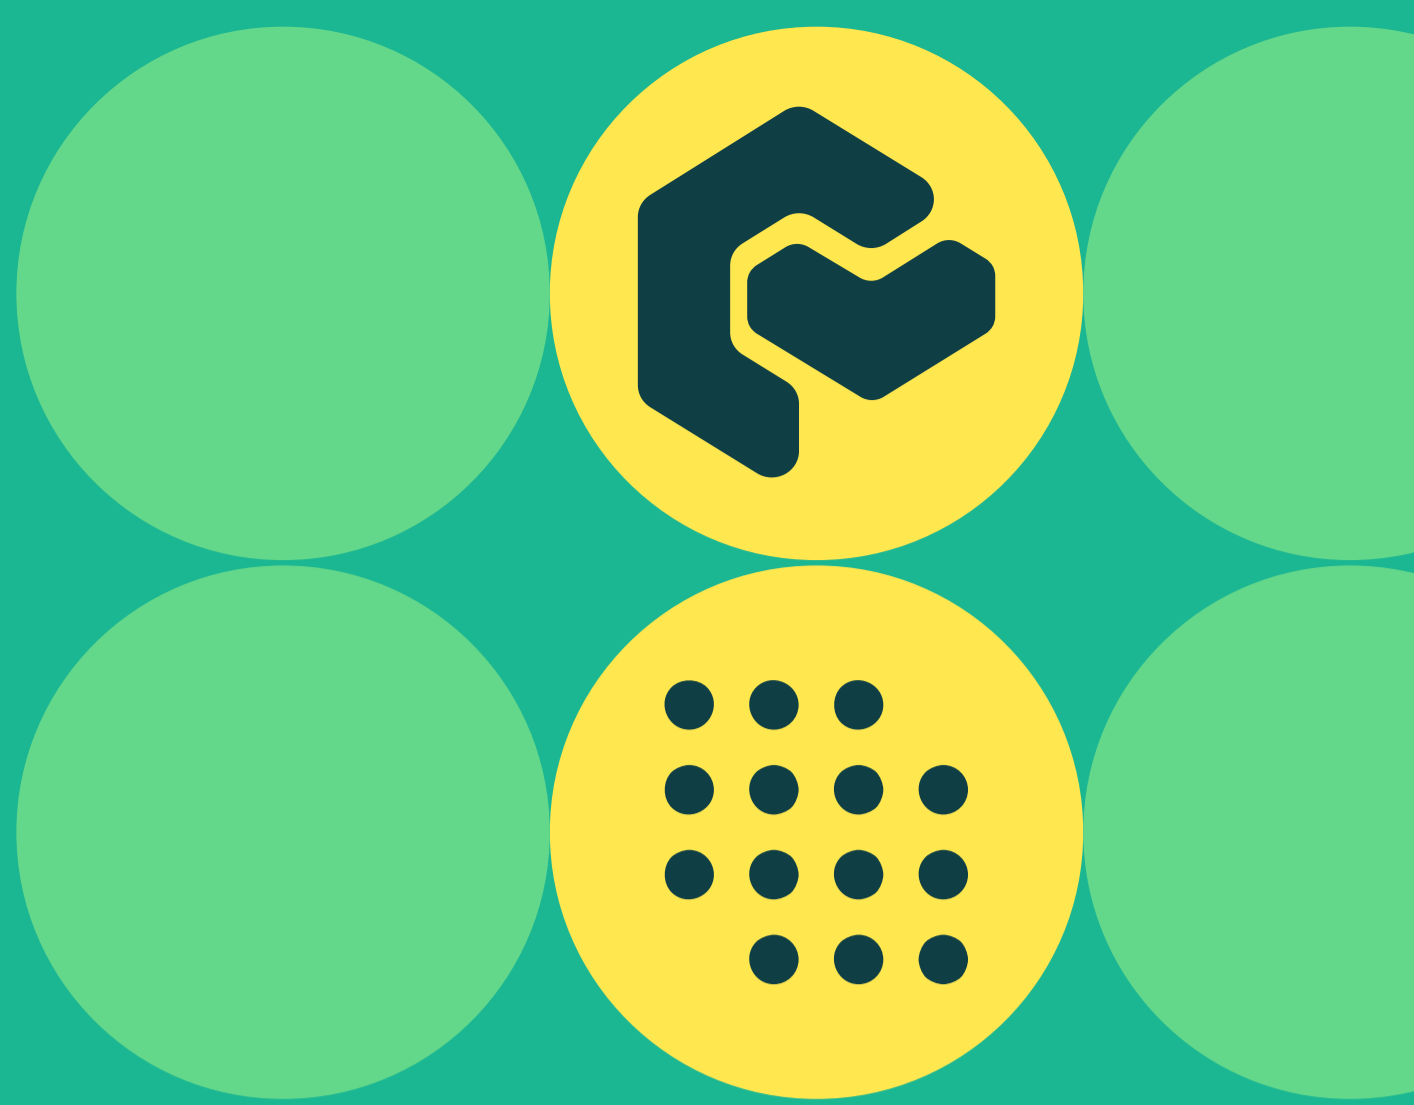

"Many firms still rely on traditional Microsoft Word templates stored on shared clouds, which is a super ineffective way of managing company know-how and data. With AI solutions, companies will find it increasingly easier to revolutionize their document workflows."

Legal Systems' use of Certn's remote identity verification service, formerly the Trustmatic ID service, not only solves the problem of needing to provide clients with a secure and AML-compliant ID verification service, but also positions them at the forefront of innovation in the legal sector.

With Certn ID, Legal Systems benefits from enhanced efficiency and accuracy in client onboarding processes, which is crucial for confidentiality and security in the sector.

Secure & Streamlined Remote ID Verification

Results with Certn ID

Streamlined Workflows

Compliant Screening

Seamless User Experience

More Efficient and Accurate
Client Onboarding

Legal Systems grappled with the challenge of meeting stringent regulatory requirements while delivering a seamless and secure online user experience. In addition to being compliant, the solution needed to integrate with their existing systems to uphold their goal of helping their clients achieve operational efficiencies.

Some of the factors, that led them to partner with Certn are:

- A robust public API for effortless integration into existing workflows
- Consistent superiority in authenticating local IDs (we support over 13,500 ID types)
- An endorsement from another happy client

“We wanted to offer our clients a sophisticated ID verification solution, but the technology was beyond our technical capabilities. Therefore, we had to seek out a reliable IDV partner.”
